

E Entirely Unsorted Sequences

Time limit: 4s

You have recently been promoted to lead scientist at NASA, the National Association for Sorting Algorithms. Congratulations! Your primary responsibility is testing the sorting algorithms that your team produces. Fortunately, NASA has a large budget this year, and you were able to buy some state of the art integers you can use to test the sorting algorithms.

As the lead scientist, you are well aware that algorithms are tested by their behaviour on worst case inputs. So, to test sorting algorithms, you need sequences that are as unsorted as possible.

Given a sequence of numbers (a_1, \dots, a_n) we say that an element a_k is sorted if for all indices j such that $j > k$, $a_j \geq a_k$ and for all indices j such that $j < k$, $a_j \leq a_k$. For example, in

$$(1, 3, 2, 3, 4, 6, 5, 5)$$

the sorted elements are the 1, the second occurrence of 3, and the 4. Note that a sequence is sorted if and only if all its elements are sorted. A sequence is called *entirely unsorted* if none of its elements are sorted.

Given a sequence of integers, what is the number of entirely unsorted sequences you can make by permuting its elements? Two sequences (b_1, \dots, b_n) and (c_1, \dots, c_n) are considered to be different if there is some index $i \in \{1, \dots, n\}$ for which $b_i \neq c_i$. Because the number of permutations may be very large, please give it modulo $10^9 + 9$.

Input

The input starts with an integer $1 \leq n \leq 5000$. Then follows a single line with n integers a_1, \dots, a_n , with $0 \leq a_i \leq 10^9$ for all i .

Output

Print a single integer: the number of entirely unsorted sequences you can make by permuting the a_i , modulo $10^9 + 9$.

Sample Input 1

4 0 1 2 3	14
--------------	----

Sample Output 1

Sample Input 2

5 1 1 2 1 1	1
----------------	---

Sample Output 2

Sample Input 3**Sample Output 3**

13 1 2 3 4 5 6 7 8 9 10 11 12 13	298600727
-------------------------------------	-----------
